

Keep our Environment Clean.

Today people all over the world are worried about what is happening to the environment, because of modern industry and agriculture, and the need for more energy. Newspapers and magazines write about water pollution, air pollution and land pollution.

Today many parts of the world are crowded, people live in big cities and much of our waste, especially waste from factories, electric power stations, the chemical industry and the heavy industry are very dangerous. Fish dies in the lakes, rivers and seas, forest trees die too. Much of this waste goes into the air and is carried by wind for great distances.

Pollution is the greatest danger. Today many lakes, rivers and seas are in danger not only in our country, but in other countries too. And it is a great danger not only for fish, but for people too, especially for children, because swimming in such waters is impossible because of the danger to their health.

And there is another danger too. In future they won't be useful for navigation.

The earth is our home. We must take care of it for ourselves and for the next generations. Each of us must do everything possible to keep the land, air and water clean. We mustn't throw this, papers and other things into the rivers and lakes and we must take care of birds and animals too.

In this world around us there are two things that do not belong to anyone country : air and ocean water. One of the most important pollution problems is in the oceans. If a ship loses some of the oil in the water or trash from the ship is put into the ocean, the water becomes dirty. A lot of fish and many birds die of the polluted water. The ocean is nearly dead. If nothing is done about it, one day nothing will be able to live in the oceans. And fish may also move to another part of the ocean.

Many of today's problems existed in the past, and there were other problems then that we rarely face today. Pollution was a very important problem for city governments in the last century, particularly with regards to water supplies. They had some idea that water could be polluted, but they did not know how. Trying to get pure water was a big problem. The Earth is our home. We must take care of it for ourselves and for the next generations. Each of us must do everything possible to keep the land air and water clean. In order to be healthy and happy on the planet, must obey the laws and protect the nature and our planet.

All woods are home to animals
So, we must behave like guests

We can only look and never touch
The birds and rabbits nests
